

Estimating incentive and welfare effects of non-stationary unemployment benefits

Andrey Launov and Klaus Wälde

University of Mainz, UC Louvain-la-Neuve and CESifo

1. Introduction

European unemployment

- The starting point

1. Introduction

European unemployment

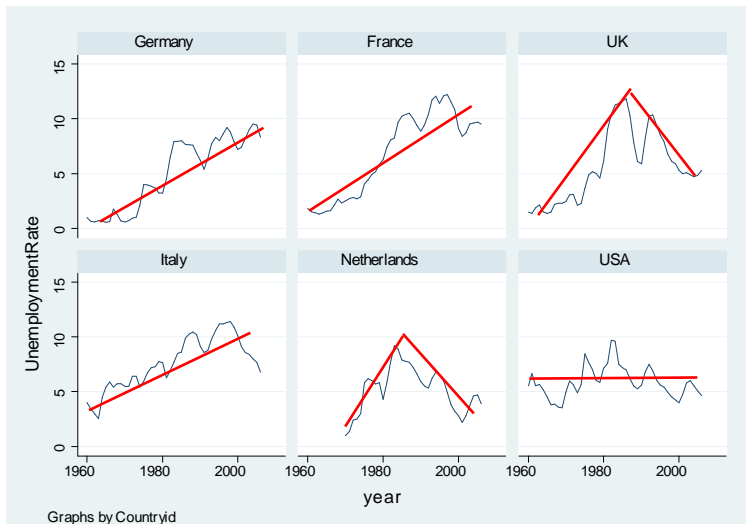

- The starting point

1. Introduction

European unemployment

- The starting point

1. Introduction

European unemployment

- The causes

Shocks? Institutions? Interaction of institutions?

→ Interaction of shocks and institutions!

Ljungqvist Sargent (1998, 2007a, b, c), Mortensen Pissarides (1999),
Blanchard Wolfers (2000)

1. Introduction

European unemployment

- The causes

Shocks? Institutions? Interaction of institutions?

→ Interaction of shocks and institutions!

Ljungqvist Sargent (1998, 2007a, b, c), Mortensen Pissarides (1999),
Blanchard Wolfers (2000)

- The options

“get rid of institutions” (as shocks won't go)

1. Introduction

European unemployment

- The causes

Shocks? Institutions? Interaction of institutions?

→ Interaction of shocks and institutions!

Ljungqvist Sargent (1998, 2007a, b, c), Mortensen Pissarides (1999),
Blanchard Wolfers (2000)

- The options

“get rid of institutions” (as shocks won't go)

- Do we want this?

classic efficiency-equity trade-off

“solved” / addressed by many countries in different ways

1. Introduction

The example of Germany

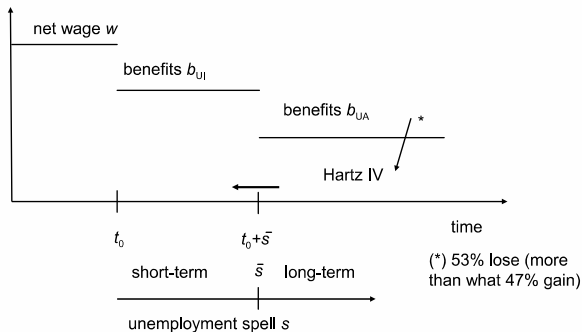

How did Germany address the efficiency-equity trade-off?

1. Introduction

The example of Germany

How did Germany address the efficiency-equity trade-off?

- Reduction of length and level of payments

1. Introduction

The example of Germany

How did Germany address the efficiency-equity trade-off?

- Reduction of length and level of payments

- How desirable are reforms of this type?
- Given risk-aversion, how do length and level of unemployment benefits affect social welfare/ insurance mechanism?

1. Introduction

Findings

1. Introduction

Findings

Design of the reform

1. Introduction

Findings

Design of the reform

- The low-skilled gain, the medium- and high-skilled lose (both in East and West Germany)

1. Introduction

Findings

Design of the reform

- The low-skilled gain, the medium- and high-skilled lose (both in East and West Germany)

Equilibrium effects

1. Introduction

Findings

Design of the reform

- The low-skilled gain, the medium- and high-skilled lose (both in East and West Germany)

Equilibrium effects

- Workers that lose search harder due to the reform - effort increases and their unemployment rates fall

1. Introduction

Findings

Design of the reform

- The low-skilled gain, the medium- and high-skilled lose (both in East and West Germany)

Equilibrium effects

- Workers that lose search harder due to the reform - effort increases and their unemployment rates fall
- The gross wage falls for almost all groups (not low-skilled in East)
- The net wage *increases* for most groups (not for medium and high-skilled in East) – contradicting the general public perception

1. Introduction

Findings

Design of the reform

- The low-skilled gain, the medium- and high-skilled lose (both in East and West Germany)

Equilibrium effects

- Workers that lose search harder due to the reform - effort increases and their unemployment rates fall
- The gross wage falls for almost all groups (not low-skilled in East)
- The net wage *increases* for most groups (not for medium and high-skilled in East) – contradicting the general public perception
- Intuition builds on wage bargaining, more vacancies and lower taxation

1. Introduction

Findings

Design of the reform

- The low-skilled gain, the medium- and high-skilled lose (both in East and West Germany)

Equilibrium effects

- Workers that lose search harder due to the reform - effort increases and their unemployment rates fall
- The gross wage falls for almost all groups (not low-skilled in East)
- The net wage *increases* for most groups (not for medium and high-skilled in East) – contradicting the general public perception
- Intuition builds on wage bargaining, more vacancies and lower taxation
- Firms gain ...
... as long as gross wages fall

1. Introduction

Findings

Design of the reform

- The low-skilled gain, the medium- and high-skilled lose

Equilibrium effects

- Workers that lose search harder due to reform - effort increases and their unemployment rates fall
- The gross wage falls for almost all groups (not low-skilled in East)
- The net wage *increases* for most groups

1. Introduction

Findings

Design of the reform

- The low-skilled gain, the medium- and high-skilled lose

Equilibrium effects

- Workers that lose search harder due to reform - effort increases and their unemployment rates fall
- The gross wage falls for almost all groups (not low-skilled in East)
- The net wage *increases* for most groups
- Looking at expected utility, public perception is right again:

1. Introduction

Findings

Design of the reform

- The low-skilled gain, the medium- and high-skilled lose

Equilibrium effects

- Workers that lose search harder due to reform - effort increases and their unemployment rates fall
- The gross wage falls for almost all groups (not low-skilled in East)
- The net wage *increases* for most groups
- Looking at expected utility, public perception is right again: only low-skilled gain due to reform, medium- and high-skilled lose

1. Introduction

Findings

Design of the reform

- The low-skilled gain, the medium- and high-skilled lose

Equilibrium effects

- Workers that lose search harder due to reform - effort increases and their unemployment rates fall
- The gross wage falls for almost all groups (not low-skilled in East)
- The net wage *increases* for most groups
- Looking at expected utility, public perception is right again: only low-skilled gain due to reform, medium- and high-skilled lose

Why?

1. Introduction

Findings

Design of the reform

- The low-skilled gain, the medium- and high-skilled lose

Equilibrium effects

- Workers that lose search harder due to reform - effort increases and their unemployment rates fall
- The gross wage falls for almost all groups (not low-skilled in East)
- The net wage *increases* for most groups
- Looking at expected utility, public perception is right again: only low-skilled gain due to reform, medium- and high-skilled lose

Why?

- Though medium- and high-skill workers in West gain through higher net wage,

1. Introduction

Findings

Design of the reform

- The low-skilled gain, the medium- and high-skilled lose

Equilibrium effects

- Workers that lose search harder due to reform - effort increases and their unemployment rates fall
- The gross wage falls for almost all groups (not low-skilled in East)
- The net wage *increases* for most groups
- Looking at expected utility, public perception is right again: only low-skilled gain due to reform, medium- and high-skilled lose

Why?

- Though medium- and high-skill workers in West gain through higher net wage, they anticipate that they might become long-term unemployed

1. Introduction

Findings

Design of the reform

- The low-skilled gain, the medium- and high-skilled lose

Equilibrium effects

- Workers that lose search harder due to reform - effort increases and their unemployment rates fall
- The gross wage falls for almost all groups (not low-skilled in East)
- The net wage *increases* for most groups
- Looking at expected utility, public perception is right again: only low-skilled gain due to reform, medium- and high-skilled lose

Why?

- Though medium- and high-skill workers in West gain through higher net wage, they anticipate that they might become long-term unemployed and they lose in an expected utility sense. Hartz IV reforms are welfare reducing for 4 out of 6 groups

4. Structural estimation
5. The effect of labour market reforms
6. Conclusion

2. The model

2. The model

Search and matching model

2. The model

Search and matching model with time-dependent unemployment benefits,

2. The model

Search and matching model with time-dependent unemployment benefits, endogenous effort, risk-averse households

2. The model

Search and matching model with time-dependent unemployment benefits, endogenous effort, risk-averse households and endogenous individual spell effect.

2. The model

Search and matching model with time-dependent unemployment benefits, endogenous effort, risk-averse households and endogenous individual spell effect. Households are ex-ante heterogeneous in skills k and type χ . Skills are known, type is unknown to individual (individual can learn over time)

2. The model

Search and matching model with time-dependent unemployment benefits, endogenous effort, risk-averse households and endogenous individual spell effect. Households are ex-ante heterogeneous in skills k and type χ . Skills are known, type is unknown to individual (individual can learn over time)

- Labour force (consider one skill group to start with)

N labour force, $L(t)$ employed, $N - L(t)$ unemployed

A output of worker-firm pair, λ exog. separation rate

2. The model

Search and matching model with time-dependent unemployment benefits, endogenous effort, risk-averse households and endogenous individual spell effect. Households are ex-ante heterogeneous in skills k and type χ . Skills are known, type is unknown to individual (individual can learn over time)

- Labour force (consider one skill group to start with)

N labour force, $L(t)$ employed, $N - L(t)$ unemployed

A output of worker-firm pair, λ exog. separation rate

- Spell-dependent benefit system

$$b(s) = \begin{cases} b_{UI} & \text{for short-term unemployed, } 0 \leq s \leq \bar{s} \\ b_{UA} & \text{for long-term unemployed, } \bar{s} < s \end{cases}$$

with replacement rate, e.g.

$$b_{UI} = \zeta_{UI} w$$

We choose \bar{s} identical for all (value of having a job is then constant)

2. The model

- Exit rate(s) into employment $\mu(\cdot)$

individual effort $\phi(s)$

labour market tightness $\theta \equiv V/U$

an individual's type $\chi \in \{0, 1\}$ with subjective belief $p(s) \equiv \text{Prob}(\chi = 1)$

2. The model

- Exit rate(s) into employment $\mu(\cdot)$

individual effort $\phi(s)$

labour market tightness $\theta \equiv V/U$

an individual's type $\chi \in \{0, 1\}$ with subjective belief $p(s) \equiv \text{Prob}(\chi = 1)$

objective arrival rate: $\mu(\phi(s)\theta, \chi)$

subjective arrival rate: $\mu(\phi(s)\theta, p(s))$

2. The model

- Exit rate(s) into employment $\mu(\cdot)$

individual effort $\phi(s)$

labour market tightness $\theta \equiv V/U$

an individual's type $\chi \in \{0, 1\}$ with subjective belief $p(s) \equiv \text{Prob}(\chi = 1)$

objective arrival rate: $\mu(\phi(s)\theta, \chi)$

subjective arrival rate: $\mu(\phi(s)\theta, p(s))$

- Government budget constraint

$$\kappa \frac{w}{1 - \kappa} L = b_{UI} U_{short} + b_{UA} U_{long}$$

where κ is the tax rate on gross wage and w is the net wage

2. The model

Wage setting

2. The model

Wage setting

- Nash vs strategic bargaining?

2. The model

Wage setting

- Nash vs strategic bargaining?
- We use Nash bargaining, as outside option of union is stationary under collective bargaining (with and without history-dependent entitlement $\bar{s}(I)$)

2. The model

Wage setting

- Nash vs strategic bargaining?
- We use Nash bargaining, as outside option of union is stationary under collective bargaining (with and without history-dependent entitlement $\bar{s}(I)$)

Collective wage setting

2. The model

Wage setting

- Nash vs strategic bargaining?
- We use Nash bargaining, as outside option of union is stationary under collective bargaining (with and without history-dependent entitlement $\bar{s}(I)$)

Collective wage setting

- Wage equation

$$(1 - \beta) u(w_k) + \beta m_{w_k}(\cdot) w_k = (1 - \beta) u(b_{UI,k}, \phi_k(0)) + \beta (1 - \kappa) m_{w_k}(\cdot) \left[A_k + \gamma_k \theta_k \frac{\mu(\phi_k(0), 0)}{\bar{\mu}_k} \right]$$

where

$$m_{w_k}(w_k, b_{UI}, \phi_k(0)) \equiv u_w(w_k) + \frac{\lambda_k}{\rho + \mu(\phi_k(0), 0)} u_w(b_{UI,k}, \phi_k(0))$$

3. Equilibrium properties

3.1 Individual (un)employment probabilities

3. Equilibrium properties

3.1 Individual (un)employment probabilities

We need expression for unemployment rate,

3. Equilibrium properties

3.1 Individual (un)employment probabilities

We need expression for unemployment rate, starting with group k and some type χ

3. Equilibrium properties

3.1 Individual (un)employment probabilities

We need expression for unemployment rate, starting with group k and some type χ

- Semi-Markov setup

probability $\left\{ \begin{array}{l} p_{eu}(\tau) \\ p_{uu}(\tau, s(t)) \end{array} \right\}$ of a person $\left\{ \begin{array}{l} \text{employed} \\ \text{unemployed} \end{array} \right\}$ in t to be unemployed in τ , given current spell $s(t)$

3. Equilibrium properties

3.1 Individual (un)employment probabilities

We need expression for unemployment rate, starting with group k and some type χ

- Semi-Markov setup

probability $\left\{ \begin{array}{c} p_{eu}(\tau) \\ p_{uu}(\tau, s(t)) \end{array} \right\}$ of a person $\left\{ \begin{array}{c} \text{employed} \\ \text{unemployed} \end{array} \right\}$ in t to be unemployed in τ , given current spell $s(t)$

- Volterra integral equations for $s(t) = 0$

$$p_{uu}(\tau, 0) = e^{-\int_t^\tau \mu(s(y)) dy} + \int_t^\tau e^{-\int_t^v \mu(s(y)) dy} \mu(s(v)) p_{eu}(\tau - v) dv$$

3. Equilibrium properties

3.1 Individual (un)employment probabilities

We need expression for unemployment rate, starting with group k and some type χ

- Semi-Markov setup

probability $\left\{ \begin{array}{l} p_{eu}(\tau) \\ p_{uu}(\tau, s(t)) \end{array} \right\}$ of a person $\left\{ \begin{array}{l} \text{employed} \\ \text{unemployed} \end{array} \right\}$ in t to be unemployed in τ , given current spell $s(t)$

- Volterra integral equations for $s(t) = 0$

$$p_{uu}(\tau, 0) = e^{-\int_t^\tau \mu(s(y)) dy} + \int_t^\tau e^{-\int_t^v \mu(s(y)) dy} \mu(s(v)) p_{eu}(\tau - v) dv$$

3. Equilibrium properties

3.2 Aggregate unemployment

3. Equilibrium properties

3.2 Aggregate unemployment

- Steady state with pure idiosyncratic risk

$$\frac{U}{N} = \frac{p_{eu}}{p_{eu} + \int_0^{\infty} p_{ue}(s(t)) dF(s(t))}$$

3. Equilibrium properties

3.2 Aggregate unemployment

- Steady state with pure idiosyncratic risk

$$\frac{U}{N} = \frac{p_{eu}}{p_{eu} + \int_0^{\infty} p_{ue}(s(t)) dF(s(t))}$$

- Link to text-book model

$$p_{eu} = \frac{\lambda}{\lambda + \mu}, p_{ue} = \frac{\mu}{\lambda + \mu} \Rightarrow \frac{U}{N} = \frac{\lambda}{\lambda + \mu}$$

3. Equilibrium properties

3.2 Aggregate unemployment

- Steady state with pure idiosyncratic risk

$$\frac{U}{N} = \frac{p_{eu}}{p_{eu} + \int_0^{\infty} p_{ue}(s(t)) dF(s(t))}$$

- Link to text-book model

$$p_{eu} = \frac{\lambda}{\lambda + \mu}, \quad p_{ue} = \frac{\mu}{\lambda + \mu} \Rightarrow \frac{U}{N} = \frac{\lambda}{\lambda + \mu}$$

- Aggregation over all groups K and types

$$u_k = \pi^\lambda u_{k,1} + (1 - \pi^\lambda) u_{k,0}, \quad u = \sum_{k=1}^n \frac{N_k}{N} u_k$$

3. Equilibrium properties

3.3 Steady state

3. Equilibrium properties

3.3 Steady state

Functional forms

- Utility function

$$u(b(s), \phi(s)) = \frac{b(s)^{1-\sigma} - 1}{1-\sigma} - \phi(s)$$

- *Objective* arrival rate

$$\mu(\phi(s)\theta, \chi) = ((1-\chi)\eta_0 + \chi\eta_1) [\phi(s)\theta]^\alpha,$$

- *Subjective* arrival rate

$$\mu(\phi(s)\theta, p(s)) = ((1-p(s))\eta_0 + p(s)\eta_1) [\phi(s)\theta]^\alpha$$

3. Equilibrium properties

3.3 Steady state

Functional forms

- Utility function

$$u(b(s), \phi(s)) = \frac{b(s)^{1-\sigma} - 1}{1-\sigma} - \phi(s)$$

- *Objective* arrival rate

$$\mu(\phi(s)\theta, \chi) = ((1-\chi)\eta_0 + \chi\eta_1) [\phi(s)\theta]^\alpha,$$

- *Subjective* arrival rate

$$\mu(\phi(s)\theta, p(s)) = ((1-p(s))\eta_0 + p(s)\eta_1) [\phi(s)\theta]^\alpha$$

Evolution of the belief

$$\frac{dp(s)}{ds} = -p(s)(1-p(s))(\mu(\phi(s)\theta, 1) - \mu(\phi(s)\theta, 0)) < 0$$

4. Estimation

4.1 Data and estimation method

4. Estimation

4.1 Data and estimation method

Data (GSOEP)

- flow sample of entry into (un)employment (each month of 1997 and 1998), giving us total of 743 individuals
- (un)employment duration in current state and employment history of unemployed, giving us: l , s , b_{UI} , b_{UA} , \bar{s} , w plus socio-econ.variables \mathbf{x}

4. Estimation

4.1 Data and estimation method

Data (GSOEP)

- flow sample of entry into (un)employment (each month of 1997 and 1998), giving us total of 743 individuals
- (un)employment duration in current state and employment history of unemployed, giving us: l , s , b_{UI} , b_{UA} , \bar{s} , w plus socio-econ.variables x

Non-parametric exit rates

- falling exit rates could be individual belief or unobserved heterogeneity
- providing a good fit is important for credibility of policy evaluation

4. Estimation

4.1 Data and estimation method

4. Estimation

4.1 Data and estimation method

Data (GSOEP)

- flow sample of entry into (un)employment (each month of 1997 and 1998), giving us total of 743 individuals

- The reform (in detail)

5. Evaluating labour market reforms

5.2 The effects of the reform

- The reform (in detail)

5. Evaluating labour market reforms

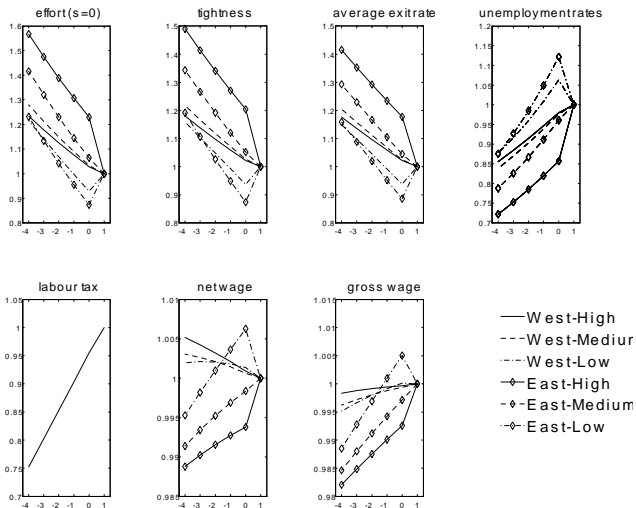

5.2 The effects of the reform

- (Joint) Aggregate effects of UA payments and entitlement length

5. Evaluating labour market reforms

5.2 The effects of the reform

- (Joint) Aggregate effects of UA payments and entitlement length

5. Evaluating labour market reforms

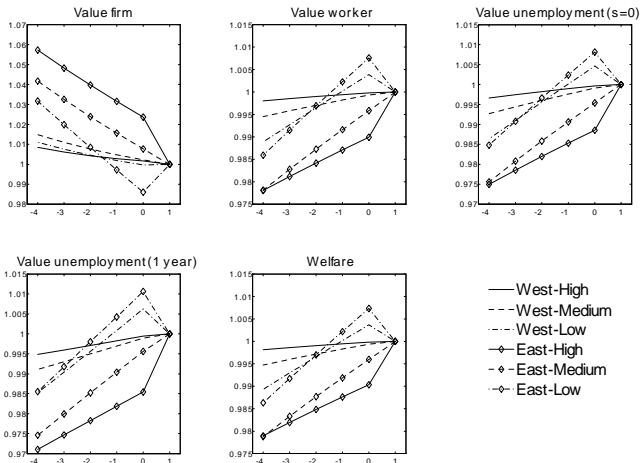

5.2 The effects of the reform

- (Joint) Distributional effects of UA payments and entitlement length

5. Evaluating labour market reforms

5.2 The effects of the reform

- (Joint) Distributional effects of UA payments and entitlement length

5. Evaluating labour market reforms

5.2 The effects of the reform

The messages (distribution)

5. Evaluating labour market reforms

5.2 The effects of the reform

The messages (distribution)

- Two groups are favoured by the reform ...
- but four groups gain in terms of net wage ...
- yet, only two groups gain in intertemporal sense

5. Evaluating labour market reforms

5.2 The effects of the reform

The mechanism

5. Evaluating labour market reforms

5.2 The effects of the reform

The mechanism

- Two groups are favoured by the reform ...
new fixed UA level is higher than previous proportional UA level
(entitlement length to UI payments reduced for all)

5. Evaluating labour market reforms

5.2 The effects of the reform

The mechanism

- Two groups are favoured by the reform ...
new fixed UA level is higher than previous proportional UA level
(entitlement length to UI payments reduced for all)
- Four groups gain in terms of net wage ...

5. Evaluating labour market reforms

5.2 The effects of the reform

The mechanism

- Two groups are favoured by the reform ...
new fixed UA level is higher than previous proportional UA level
(entitlement length to UI payments reduced for all)
- Four groups gain in terms of net wage ...
What overcompensates the drop in the outside option?

5. Evaluating labour market reforms

5.2 The effects of the reform

The mechanism

- Two groups are favoured by the reform ...
new fixed UA level is higher than previous proportional UA level
(entitlement length to UI payments reduced for all)
- Four groups gain in terms of net wage ...
What overcompensates the drop in the outside option?
 - (i) more vacancies per unempl. worker (due to higher search effort)
 - (ii) wage bargaining (given estimated para/s) implies higher wage
 - (iii) tax rate falls (fewer unemployed, lower benefits)

5. Evaluating labour market reforms

5.2 The effects of the reform

The mechanism

- Two groups are favoured by the reform ...
new fixed UA level is higher than previous proportional UA level
(entitlement length to UI payments reduced for all)
- Four groups gain in terms of net wage ...
What overcompensates the drop in the outside option?
 - (i) more vacancies per unempl. worker (due to higher search effort)
 - (ii) wage bargaining (given estimated para/s) implies higher wage
 - (iii) tax rate falls (fewer unemployed, lower benefits)
- Only two groups gain in intertemporal sense ...
The value of being employed falls for all but those favoured by the reform, gain in net wage is not enough to overcompensate the expected loss once unemployed

5. Evaluating labour market reforms

5.2 The effects of the reform

The messages (efficiency)

5. Evaluating labour market reforms

5.2 The effects of the reform

The messages (efficiency)

- Labour market reform leads to rising and falling unemployment rates

5. Evaluating labour market reforms

5.2 The effects of the reform

The messages (efficiency)

- Labour market reform leads to rising and falling unemployment rates
- The reduction of unemployment rates by skill groups in percentage points

West-High	W-Medium	W-Low	East-High	E-Medium	E-Low
0.08%	0.17%	-1.23%	2.42%	0.82%	-3.05%

- Groups with highest unemployment rates even experienced an increase in unemployment rates
- Overall effect basically zero

5. Evaluating labour market reforms

5.2 The effects of the reform

What if the reform went further?

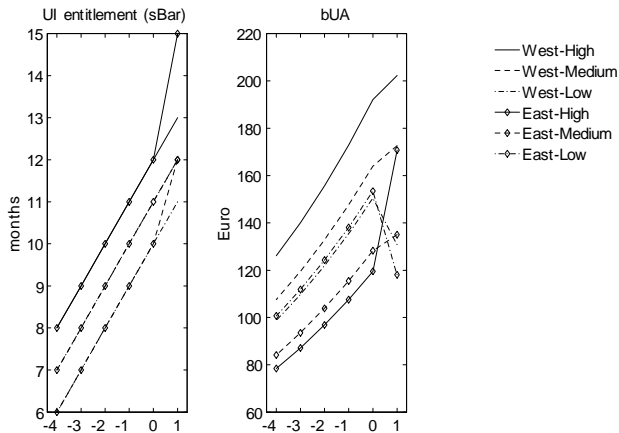

- Let us go beyond Hartz and decrease UA benefits and entitlement length further

5. Evaluating labour market reforms

5.2 The effects of the reform

What if the reform went further?

- Let us go beyond Hartz and decrease UA benefits and entitlement length further

5. Evaluating labour market reforms

5.2 The effects of the reform

What if the reform went further?

- Let us go beyond Hartz and decrease UA benefits b_{UA} and entitlement length \bar{s} further

5. Evaluating labour market reforms

5.2 The effects of the reform

What if the reform went further?

- Let us go beyond Hartz and decrease UA benefits b_{UA} and entitlement length \bar{s} further
- Effects are all small

5. Evaluating labour market reforms

5.2 The effects of the reform

What if the reform went further?

- Let us go beyond Hartz and decrease UA benefits b_{UA} and entitlement length \bar{s} further
- Effects are all small
- Reduction of b_{UA} and \bar{s} by $1/3$ reduces unemployment rate by only $1/5$
- One needs to pay a “high price” for a “low benefit”
- Welfare effects would be negative of course as well

6. Conclusion

6. Conclusion

Background

- European unemployment has been fought successfully in many countries
- there is more than output and employment in life, however
- what about insurance effect of UI systems?

6. Conclusion

Background

- European unemployment has been fought successfully in many countries
- there is more than output and employment in life, however
- what about insurance effect of UI systems?

Framework

- Random search and matching framework
- Spell-dependent unemployment benefits
- Endogenous individual duration dependence

6. Conclusion

Background

- European unemployment has been fought successfully in many countries
- there is more than output and employment in life, however
- what about insurance effect of UI systems?

Framework

- Random search and matching framework
- Spell-dependent unemployment benefits
- Endogenous individual duration dependence

Methodological results - Derivation of

- Learning behaviour leading to downward-sloping individual duration dependence
- Individual unemployment probabilities using semi-Markov structure
- Aggregate unemployment rate
- Close theory-data link

6. Conclusion

Economic results

- Unemployment rates do not fall for all groups – promise of the reform not held
- The group with highest unemployment rate experiences an even higher rate due to the reform (low-skilled in East and West)
- If reform reduced benefits for all groups, employment would rise for all

6. Conclusion

Economic results

- Unemployment rates do not fall for all groups – promise of the reform not held
- The group with highest unemployment rate experiences an even higher rate due to the reform (low-skilled in East and West)
- If reform reduced benefits for all groups, employment would rise for all

Even then, however, unemployment effects would be small due to

- low average reduction of UA payments
- low average reduction of entitlement period
- only few are directly affected

6. Conclusion

Economic results

- Unemployment rates do not fall for all groups – promise of the reform not held
- The group with highest unemployment rate experiences an even higher rate due to the reform (low-skilled in East and West)
- If reform reduced benefits for all groups, employment would rise for all

Even then, however, unemployment effects would be small due to

- low average reduction of UA payments
- low average reduction of entitlement period
- only few are directly affected

In any case, “no one wants this” as

- expected utility of four out of six groups falls due to reform
- expected utility would fall for all if reform was tough also on low-skilled workers

6. Conclusion

Economic results

- Unemployment rates do not fall for all groups – promise of the reform not held
- The group with highest unemployment rate experiences an even higher rate due to the reform (low-skilled in East and West)
- If reform reduced benefits for all groups, employment would rise for all

Even then, however, unemployment effects would be small due to

In any case, “no one wants this” as

- expected utility of four out of six groups falls due to reform
- expected utility would fall for all if reform was tough also on low-skilled workers

Bad reform!

Thank you!
